# NUCLEAR MEASUREMENTS IN INDUSTRY

SÁNDOR RÓZSA

Institute of Isotopes of the  
Hungarian Academy of Sciences  
Budapest, Hungary

AKADÉMIAI KIADÓ · BUDAPEST 1989

# CONTENTS

## Preface XI

1. Basic concepts 1
  - 1.1. Isotopes and radioactivity 2
  - 1.2. Basic laws and units of radioactivity 4
  - 1.3. Radiation sources 13
    - 1.3.1. Characteristics of sealed radiation sources 13
    - 1.3.2. The checking and criteria of hermeticity 17
    - 1.3.3. The use and commerce of radiation sources 17
  - 1.4. Interaction of radiation with material 19
    - 1.4.1.  $\alpha$ -radiation 20
    - 1.4.2.  $\beta$ -radiation 22
    - 1.4.3.  $\gamma$ -radiation 30
    - 1.4.4. Neutron radiation 38
2. Radiation detection systems 42
  - 2.1. Ionization chamber 47
  - 2.2. Proportional counter 51
  - 2.3. Geiger-Müller counter 54
  - 2.4. Semiconductor detector 63
  - 2.5. Scintillation counter 68
    - 2.5.1. Scintillators 70
    - 2.5.2. Photomultiplier tube 79
    - 2.5.3. Stabilization of the operation 85
    - 2.5.4. Scintillation spectrometry 88
    - 2.5.5. Scintillation detector with semiconductor light sensor 89
  - 2.6. Detectors of industrial nuclear instruments 91
3. Measuring methods and measuring instruments 98
  - 3.1. Isotopic measuring methods 98
    - 3.1.1. Direct measurement 98
    - 3.1.2. Measuring differences 99
    - 3.1.3. Compensating measurements 101
    - 3.1.4. Automatic calibration 102
  - 3.2. Statistical measuring error 102
  - 3.3. Radioisotopic measuring instruments 104
    - 3.3.1. Electronic systems of signal processing 106
    - 3.3.2. Universal measuring systems 109
    - 3.3.3. Intelligent measuring instruments 111
    - 3.3.4. Multichannel measuring devices 113
  - 3.4. Control systems 115

4. Indication of limit values 119
  - 4.1. Radioisotopic indication of limit values ( $\gamma$ -relays) 119
  - 4.2. Versions of radioisotopic equipment for appropriate solutions to limit-value indicating problems 123
  - 4.3. Application of level indicator  $\gamma$ -relays 133
  - 4.4. Application of level indicators in automatic control 139
  
5. Level measurement 146
  - 5.1. Absorption level-measuring instruments 146
  - 5.2. Hunting level-measuring instruments 153
  - 5.3. Gamma location profile measurements 159
  - 5.4. Level control with radioisotopic detection 161
  - 5.5. Level-measurement and technological supervision 164
  
6. Thickness measurement 165
  - 6.1. Thickness measurement with radioisotopes 165
  - 6.2. Radioisotopic thickness-measuring devices 170
  - 6.3. Applications for thickness-measuring devices 178
  - 6.4. Controlling thickness (surface mass) 185
  - 6.5. Technological supervision with thickness-measuring instruments 192
  
7. Measuring the coating thickness 196
  - 7.1. Measuring the coating thickness based on the  $\beta$ -reflection technique 196
  - 7.2. Coating thickness-measuring devices based on  $\beta$ -radiation reflection technique 199
  - 7.3. Application of layer thickness-measurement with  $\beta$ -radiation reflection principle 204
    - 7.3.1. Determining the thickness of tin coatings 204
    - 7.3.2. Measuring the thickness of zinc coatings 205
    - 7.3.3. Measuring the thickness of silver coatings 206
    - 7.3.4. Measuring the thickness of gold coatings 207
    - 7.3.5. Measuring the thickness of double layers 207
    - 7.3.6. Measuring the thickness of plastics and paint coatings 208
    - 7.3.7. Measuring the thickness of other coatings 208
    - 7.3.8. Measuring the layer thickness in bore-hole electroplating 209
  - 7.4. Measuring the layer thickness with X-ray fluorescence 209
  
8. Density measurement 214
  - 8.1. Density measurement with  $\gamma$ -radiation absorption 215
  - 8.2. Designing the measuring locations 219
    - 8.2.1. Fullness of the measuring bin 220
    - 8.2.2. Air bubbles 220
    - 8.2.3. Sedimentation in the measuring pipe 220
    - 8.2.4. Wearing of the measuring pipe 221
    - 8.2.5. Selecting the absorption length 222
    - 8.2.6. Ensuring the possibility for calibration 223
  - 8.3. Density measuring instruments 224
  - 8.4. Application of radioisotopic density meters 227

9. Measuring moisture content 235
    - 9.1. Measuring moisture content using the neutron moderation method 235
    - 9.2. Technological applications for moisture gauges 243
      - 9.2.1. Producing mixtures with constant moisture content 244
      - 9.2.2. Feeding specific amounts of moisture 246
      - 9.2.3. Feeding with weight correction 247
  10. Determining material composition with nuclear instruments 250
    - 10.1. Instruments working with radiation absorption 251
      - 10.1.1. Application of absorption of  $\beta$ -radiation 251
      - 10.1.2. Application of absorption of  $\gamma$ -radiation 251
    - 10.2. Measuring by radiation reflection (scattering) 259
      - 10.2.1. Application of  $\beta$ -radiation reflection 259
      - 10.2.2. Application of  $\gamma$ -radiation reflection 261
    - 10.3. Measuring secondary radiation 263
      - 10.3.1. Measuring secondary radiation generated by  $\beta$ -radiation 265
      - 10.3.2. Measuring secondary radiation generated by  $\gamma$ -radiation 265
      - 10.3.3. Measuring fluorescence radiation 265
    - 10.4. Application of neutron radiation 271
      - 10.4.1. Activation analysis 271
      - 10.4.2. Application of spontaneous nuclear reactions 272
      - 10.4.3. Application of absorption and scattering of neutrons 273
    - 10.5. The selective interaction of  $\gamma$ -radiation 274
    - 10.6. Determination of material composition based on natural radioactivity 275
  11. Other industrial applications of nuclear methods 277
    - 11.1. Continuous measurement on conveyor belts 277
    - 11.2. Checking package filling 280
    - 11.3. Smoke detection with  $\alpha$ -radiation absorption 282
    - 11.4. Eliminating static charges 283
    - 11.5. Portable nuclear instruments 283
      - 11.5.1. Measuring the density and moisture content of soils 284
      - 11.5.2. Wall-thickness measurement with reflection technique 289
      - 11.5.3. Level-finding gauges 290
  12. Establishing radioisotopic measuring devices in industry 292
    - 12.1. The proper selection of devices and data acquisition 292
    - 12.2. Planning applications 293
    - 12.3. Operation on site 295
    - 12.4. Radiation protection 296
      - 12.4.1. Basic principles 296
      - 12.4.2. Radiation source containers 298
- Literature 303
- Subject index 305
