Studies in Surface Science and Catalysis (other volumes in the series)	XVII
Preface	XXI
List of Contributors	XXIII

**PART I: MOLECULAR METAL CLUSTERS**

Chapter 1: Synthesis of Mono- and Multimetallic Metal Clusters (Geoffroy)	1
1.1. Introduction	1
1.2. Synthetic Strategies	1
1.2.1. Synthetic methods	3
1.2.2. Ligand substitution reactions	3
1.2.3. Addition reactions	6
1.2.4. Condensation reactions	9
1.2.5. Metal exchange reactions	11
1.2.6. Bridge-assisted reactions	11
1.2.7. Bridge-assisted condensation reactions	15
1.2.8. Serendipitous reactions	16
1.2.9. Synthesis of binary metal carbonyls, $M_x(CO)_y$	16
1.3. Summary	17
References	18
Chapter 2: Structures of Metal Clusters (Geoffroy)	21
2.1. Introduction	21
2.2. Cluster Structures	21
2.2.1. Binuclear structures	21
2.2.2. Trinuclear structures	22
2.2.3. Tetranuclear structures	23
2.2.4. Pentanuclear structures	27
2.2.5. Hexanuclear structures	28
2.2.6. High-nuclearity clusters	29
References	31
Chapter 3: Thermochemical Properties and Bond Energies of Transition Metal Clusters (Connor)	33
3.1. Introduction	33
3.2. Diatomic Transition Metal Compounds	33

3.2.1. Homonuclear compounds	33
3.2.2. Heteronuclear compounds	35
3.3. Polyatomic Transition Metal Compounds	35
3.4. Polynuclear Transition Metal Compounds	35
3.4.1. Compounds containing formal single bonds between metal atoms	35
3.4.2. Compounds containing bonds of formal multiple order between metal atoms	38
3.5. Implications for Catalysis	40
References	40
<b>Chapter 4: Reactivities of Metal Clusters (Lavigne and Kaesz)</b>	<b>43</b>
4.1. Introduction	43
4.2. Pathways for Coordination of Substrate (Substrate Activation)	43
4.2.1. Introduction	43
4.2.2. Additions to metal clusters	44
4.2.2.a. Additions to multiple bonds in unsaturated clusters	44
4.2.2.b. Disruption of metal-metal bonds	50
4.2.3. Dissociation of metal-ligand bonds or reductive elimination of substrates	54
4.2.3.a. Lightly stabilized clusters	54
4.2.3.b. Elimination of small molecules	60
4.3. Activation of Metal Cluster Complexes	65
4.3.1. Introduction	65
4.3.2. Radical ion catalysis	65
4.3.3. Catalytic activation by nucleophiles	66
4.4. Transformation of Coordinated Substrates	66
4.4.1. Introduction	66
4.4.2. Activation of single bonds (H-H, C-H and P-C)	66
4.4.3. Reaction of nucleophiles with $M_3(CO)_12$ (M = Fe, Ru, Os) and formation of acyl derivatives	67
4.4.4. Transformation of coordinated CO to carbide and to hydrocarbon fragments	70
4.4.4.a. Reduction of CO initiated by nucleophilic attack of hydride; the formyl intermediate	70
4.4.4.b. C-O bond cleavage initiated by electrophilic attack	72

4.4.5. Cleavage of alkynes to dialkylidynes	75
4.4.6. Cleavage of NO and nonmetal oxo-anions	78
4.4.7. Coupling reactions of carbon fragments and of CO with carbon fragments on metal cluster complexes	78
4.5. Concluding Remarks	82
References	83
<b>Chapter 5: Homogeneous Catalysis by Metal Clusters (Markó and Vizi-Orosz)</b>	<b>89</b>
5.1. Introduction	89
5.2. Molybdenum Complexes	90
5.3. Iron Complexes	91
5.4. Ruthenium Complexes	93
5.5. Osmium Complexes	101
5.6. Cobalt Complexes	101
5.7. Rhodium Complexes	104
5.8. Nickel Complexes	108
5.9. Palladium Complexes	111
5.10. Platinum Complexes	111
5.11. Mixed-Metal Catalysts	112
5.12. Conclusions	115
References	117
<b>PART II: METAL CLUSTERS IN AND ON SUPPORTS</b>	<b>121</b>
<b>Chapter 6: Characterization by Physical Methods</b>	<b>123</b>
Section 6.1: Introduction (Knözinger)	123
References	128
Section 6.2: Vibrational Spectroscopies (Knözinger)	129
6.2.1. Vibrational spectra of molecular clusters and complexes	129
6.2.1.a. Carbonyl clusters	129
6.2.1.b. Hydrido carbonyl clusters	137
6.2.1.c. Substituted carbonyl cluster derivatives	139
6.2.1.d. Interactions of Lewis acids with carbonyl ligands	141
6.2.1.e. Mononuclear carbonyl complexes and CO chemisorption on metal surfaces	143
6.2.2. Vibrational spectroscopic techniques for surface characterization	143

6.2.2.a. Infrared transmission-absorption spectroscopy	143	6.5.3. Photoelectron spectroscopy of supported clusters and cluster-derived species	215
6.2.2.b. Infrared reflection spectroscopies	145	6.5.4. Addendum (recent results)	217
6.2.2.c. Raman spectroscopy	145	References	218
6.2.2.d. Electron vibrational spectroscopies	147		
6.2.2.e. Miscellaneous vibrational spectroscopic techniques	149	Section 6.6: Mössbauer Spectroscopy (Guczi)	221
6.2.3. Application of vibrational spectroscopies to the characterization of supported clusters and of cluster-derived species	151	6.6.1. Introduction	221
6.2.3.a. Physically adsorbed clusters	151	6.6.2. Physical background	221
6.2.3.b. Chemically anchored clusters	153	6.6.3. Mössbauer spectroscopy of supported metal clusters and particles	225
6.2.3.c. Infrared spectroscopy of supported carbonyl clusters under reaction conditions	160	6.6.4. Summary	230
6.2.3.d. Products of cluster degradation	161	References	230
6.2.3.e. Metal aggregation	164		
6.2.3.f. Disintegration of metal aggregates	164	Section 6.7: X-Ray Absorption Spectroscopy Applied to Metal Clusters (Pettifer)	231
6.2.3.g. Metal clusters in zeolites	166	6.7.1. Introduction	231
References	168	6.7.2. Experimental techniques	237
		6.7.2.a. Data collection	237
Section 6.3: Optical Spectroscopy (Knözinger)	173	6.7.2.b. Data reduction	241
6.3.1. UV-visible spectra of molecular clusters	173	6.7.3. Theory	241
6.3.2. Diffuse reflectance spectroscopy	178	6.7.3.a. Direct calculation of fine structure	241
6.3.3. Diffuse reflectance spectroscopy of supported clusters	180	6.7.3.b. The inversion problem	246
6.3.4. Summary	185	6.7.4. EXAFS of cluster-derived catalysts	251
References	185	6.7.4.a. Case study of EXAFS of supported osmium catalysts	251
		6.7.4.b. Other studies of cluster-derived catalysts	255
Section 6.4: Magnetic Resonance (Knözinger)	187	6.7.5. Conclusions	257
6.4.1. Introduction	187	References	257
6.4.2. Electron paramagnetic resonance (EPR)	187		
6.4.2.a. EPR of molecular clusters	188	Section 6.8: Thermoanalytical Methods (Knözinger)	259
6.4.2.b. EPR of supported cluster-derived species	189	References	263
6.4.3. Nuclear magnetic resonance (NMR)	191		
6.4.3.a. NMR spectroscopy of molecular clusters	193	Chapter 7: Dispersed Metal Clusters From Metal Vapor Chemistry (Ozin and Andrews)	265
6.4.3.b. NMR spectroscopy of supported clusters and complexes	198	7.1. Introduction	265
6.4.4. Conclusions	204	7.2. Metal Clusters in Matrices	270
References	204	7.2.1. Ligand-free clusters in weakly interacting matrices	270
		7.2.2. Spectroscopy of ligand-free metal clusters in weakly interacting matrices	274
Section 6.5: Photoelectron Spectroscopies (Guczi)	209	7.2.2.a. Electron spin resonance (ESR) spectroscopy of low-nuclearity metal clusters	274
6.5.1. Physical background	209		
6.5.2. Photoelectron spectroscopy of molecular clusters	211		

7.2.2.b. Electron spin resonance spectroscopy of high-nuclearity metal clusters	283	8.3.5. Sorption of labile organic complexes	366
7.2.2.c. Mössbauer spectroscopy of metal clusters	289	8.3.6. Formation of polycyano inclusion compounds	367
7.2.2.d. Vibrational spectroscopy of metal clusters	292	8.3.7. Association of large amounts of metal precursors with ZSM-5 zeolites	367
7.2.2.e. Magnetic circular dichroism (MCD) of metal clusters	297	8.3.8. Preparation of precursors of shape-selective metal catalysts	367
7.2.2.f. Photoemission spectroscopy of metal clusters	297	8.3.9. Comparison of methods and their simultaneous utilization	368
7.2.2.g. Ultraviolet-visible absorption and emission spectroscopy of metal clusters	298	8.3.10. Ball-milling of elemental tellurium with zeolite X	368
7.2.3. Reactions of ligand-free metal clusters	303	8.4. Activation of Metal-Zeolite Precursors	369
7.3. Metal Clusters in Polymeric and Oligomeric Supports	307	8.4.1. Dehydration of cation-exchanged zeolites	369
7.3.1. Metal clusters in reactive polymers and oligomers	309	8.4.2. Autoreduction of transition metal ions in zeolites	370
7.3.2. Metal clusters in DC510; microscale, quiescent liquid film metal vapor chemistry	310	8.4.3. Autoreduction of transition metal ions in zeolites exchanges with ammine complexes	371
7.3.3. Assignment of metal cluster nuclearities	317	8.4.4. Thermal decomposition of sorbed metal carbonyls	372
7.3.4. Thermal agglomeration kinetics for Mo <sub>n</sub> /DC510	328	8.4.5. Thermal activation of metal-ZSM-5 zeolite precursors	374
7.3.5. Mode of metal cluster formation, bonding, and stabilization in poly-(dimethyl-co-methylphenylsiloxane)	329	8.4.6. Thermal activation of polycyano inclusion compounds	375
7.3.6. Metal atom reactions with oligosilastyrenes and polymethylcyclopentadienesiloxanes	331	8.5. Reduction of Activated Metal-Zeolite Precursors	375
7.3.7. Metal atoms in unreactive polymers and oligomers	334	8.5.1. Reduction with molecular hydrogen	375
7.4. Oxide- and Zeolite-supported Metal Clusters	336	8.5.1.a. Overall stoichiometry	375
7.4.1. Solvated metal atom dispersion methods	336	8.5.1.b. Differences in reducibility of transition metal-containing zeolites	377
7.4.2. Modification of well-defined hydroxylated oxide surfaces with solvated metal atoms	343	8.5.1.c. Correlations in reducibility of different transition metal ions in zeolites	377
7.4.2.a. Iron on silica	343	8.5.2. Reduction with atomic hydrogen	378
7.4.2.b. Iron on titania	349	8.5.3. Reduction with carbon monoxide	379
Acknowledgments	351	8.5.4. Reduction with other reactants such as ammonia and metal vapors	381
References	351	8.5.5. Factors determining the reducibility of transition metal ions in zeolites	382
Chapter 8: Metal Clusters and Zeolites (Jacobs)	357	8.5.5.a. Effects of residual lattice hydroxyl groups	383
8.1. Introduction	357	8.5.5.b. Influence of cation location	384
8.2. Importance of Metal-containing Zeolites in Industrial Catalysis	358	8.5.5.c. Influence of irreducible polyvalent cations	388
8.3. Association of Metal Precursors with a Zeolite Matrix	359	8.5.6. Attempt to rationalize reducibilities of transition metal ions in zeolites	389
8.3.1. Generation of transition-metal ion zeolites by stoichiometric ion-exchange processes	359	8.5.7. Kinetics of reduction of transition metal ions in zeolites with molecular hydrogen	392
8.3.2. Preparation of transition metal containing zeolites by nonstoichiometric ion exchange	362	8.6. Metal Sintering in Zeolites and Stabilization of the System	395
8.3.3. Competitive ion exchange	363		
8.3.4. Loading of zeolites with metal carbonyls	363		

8.6.1. Silver zeolites	395	9.2.3.1. Iron clusters	431
8.6.2. Pt and Pd zeolites	396	9.2.3.2. Cobalt clusters	437
8.6.3. Ni zeolites	400	9.2.3.3. Nickel clusters	439
8.6.4. Fe and Ru zeolites	401	9.2.4. Surface organometallic chemistry of second- and third-row transition metal carbonyl clusters	440
8.6.5. Summary	403	9.2.4.1. Rhodium clusters	440
8.7. Catalytic Properties of Metal-Containing Zeolites	403	9.2.4.1.a. $\text{Rh}_6(\text{CO})_{16}$ and $\text{Rh}_4(\text{CO})_{12}$ on silica	441
8.7.1. Particle size and support effects	404	9.2.4.1.b. $\text{Rh}_6(\text{CO})_{16}$ and $\text{Rh}_4(\text{CO})_{12}$ on alumina	443
8.7.2. Sensitivity to poisoning of metal aggregates in zeolites	406	9.2.4.1.c. $\text{Rh}_6(\text{CO})_{16}$ on other oxides	448
8.7.3. Shape-selective metal catalysis	406	9.2.4.1.d. Rhodium carbonyl anions on various oxides	449
8.8. Conclusions	407	9.2.4.2. Iridium clusters	449
Acknowledgments	409	9.2.4.3. Platinum clusters	451
References	409	9.2.4.4. Osmium clusters	451
Chapter 9: Supported Metal Catalysts Prepared from Molecular Metal Clusters: Organometallic Surface Chemistry	415	9.2.4.4.a. $\text{Os}_3(\text{CO})_{12}$ , $\text{H}_2\text{Os}_3(\text{CO})_{10}$ , and $\text{Os}_6(\text{CO})_{18}$ on silica	451
Section 9.1: Metal Clusters on Functionalized Supports (Gates)	415	9.2.4.4.b. $\text{Os}_3(\text{CO})_{12}$ and $\text{Os}_6(\text{CO})_{18}$ on alumina	456
9.1.1. Introduction	415	9.2.4.4.c. $\text{Os}_3(\text{CO})_{12}$ and $\text{H}_2\text{Os}_3(\text{CO})_{10}$ on titania and zinc oxide	459
9.1.2. Synthesis	416	9.2.4.4.d. $\text{Os}_3(\text{CO})_{12}$ on magnesia	459
9.1.2.1. Clusters on polymers	416	9.2.4.5. Ruthenium clusters	462
9.1.2.1.a. Ligand association	416	9.2.4.5.a. $\text{Ru}_3(\text{CO})_{12}$ on silica	463
9.1.2.1.b. Ligand exchange	418	9.2.4.5.b. $\text{Ru}_3(\text{CO})_{12}$ and other ruthenium clusters on alumina	466
9.1.2.1.c. Oxidative addition	418	9.2.4.5.c. $\text{Ru}_3(\text{CO})_{12}$ and $\text{H}_4\text{Ru}_4(\text{CO})_{12}$ on magnesia	469
9.1.2.1.d. Ion exchange	418	9.2.5. Supported bimetallic clusters	470
9.1.2.1.e. Synthesis variables	418	9.2.5.1. Bimetallic Rh-Co carbonyl clusters on metal oxides	470
9.1.2.2. Clusters on oxides	419	9.2.5.2. $\text{HFeCo}_3(\text{CO})_{12}$ and $\text{H}_2\text{RuOs}_3(\text{CO})_{13}$ on alumina	470
9.1.3. Structural characterization	422	9.2.5.3. $\text{H}_2\text{FeOs}_3(\text{CO})_{13}$ on silica	471
9.1.4. Reactivity	422	9.2.5.4. Other mixed metal clusters on $\gamma$ -alumina	472
References	424	9.2.6. Summary and conclusions	473
Section 9.2.: Metal Clusters on Unfunctionalized Inorganic Oxides (Psaro and Ugo)	427	9.2.7. Addendum	473
9.2.1. Introduction	427	References	487
9.2.2. Methods for preparation and characterization	429	Section 9.3: Supported Metal Cluster Catalysts for Alkene Conversion (Gates)	497
9.2.2.1. Techniques for preparation of supported or entrapped metal clusters	429	9.3.1. Introduction	497
9.2.2.2. Methodologies of characterization of surface species	430	9.3.2. Catalytic activity	497
9.2.3. Surface organometallic chemistry of first-row transition metal carbonyl clusters	430		

9.3.3.	Supported metals with simple structures derived from supported metal clusters	503
9.3.4.	Summary and evaluation	506
References		506
Section 9.4:	Supported Metal Catalysts Prepared from Molecular Clusters: Activities for Hydrogenolysis and Skeletal Isomerization of Hydrocarbons (Maire)	509
9.4.1.	Introduction	509
9.4.2.	Approaches to mechanisms of skeletal rearrangements of hydrocarbons via metallacarbene and metallacarbyne chemistry	510
9.4.2.a.	Skeletal isomerization	514
9.4.2.b.	Aromatization	514
9.4.2.c.	Hydrogenolysis of alkanes	515
9.4.3.	Supported monometallic catalysts prepared by decomposition of molecular metal clusters	523
9.4.3.a.	Skeletal rearrangements of hydrocarbons	524
9.4.3.b.	Alkene hydrogenation	524
9.4.4.	Correlations between the mechanisms of reaction of hydrocarbons and the structure and composition of the active centers	527
9.4.5.	Conclusions	528
Acknowledgments		528
References		528
Section 9.5:	CO Hydrogenation Catalysis and Supported Metal Clusters (Knözinger and Gates)	531
9.5.1.	Introduction	531
9.5.2.	Modeling of the Fischer-Tropsch reaction by molecular metal clusters	532
9.5.3.	Stoichiometric reactions of metal clusters on oxide surfaces	535
9.5.4.	Evidence of catalysis by magnesia-supported molecular osmium clusters	536
9.5.5.	Conventional supported metal catalysts prepared from metal clusters	542
9.5.6.	Metal aggregates in zeolite cages	543
9.5.7.	Conclusions	543
References		543

Chapter 10:	Supported Bimetallic Catalysts Derived from Molecular Metal Clusters (Guczzi)	547
10.1.	Introduction	547
10.2.	Preparation of Cluster-derived Bimetallic Catalysts	548
10.2.1.	Preparation of bimetallic catalysts by deposition of carbonyl clusters on oxides	548
10.2.2.	Preparation of bimetallic catalysts from organometallic compounds anchored to the support	549
10.2.3.	Preparation of bimetallic catalysts on functionalized supports	549
10.3.	Characterization and Catalytic Activity of Bimetallic Catalysts Derived from Molecular Clusters	549
10.3.1.	Bimetallic catalysts derived from molecular bimetallic clusters containing iron, ruthenium, or osmium	550
10.3.1.a.	Interaction of molecular bimetallic clusters with supports	550
10.3.1.b.	Decomposition of supported bimetallic clusters with segregation of the metals	553
10.3.1.c.	Formation of supported bimetallic particles from metal clusters	554
10.3.1.d.	Catalytic activity	556
10.3.2.	Bimetallic catalysts derived from molecular cobalt-rhodium clusters	560
10.3.2.a.	Interaction with oxide surfaces and cluster decomposition	560
10.3.2.b.	Catalytic activity of CoRh bimetallic catalysts prepared from molecular clusters	561
10.3.3.	Bimetallic catalysts derived from molecular clusters of platinum and palladium	562
10.4.	Comparison of Bimetallic Catalysts Prepared from Molecular Clusters and from Inorganic Salts	567
10.4.1.	Iron-ruthenium catalysts	567
10.4.2.	Ruthenium- and osmium-containing catalysts prepared from inorganic salts	568
10.5.	Conclusions	570
Acknowledgment		571

Volume 11	<b>Metal-Support and Metal-Additive Effects in Catalysis.</b> Proceedings of an International Symposium organized by the Institut de Recherches sur la Catalyse – CNRS – Villeurbanne and sponsored by the Centre National de la Recherche Scientifique, Ecully (Lyon), September 14–16, 1982 edited by <b>B. Imelik, C. Naccache, G. Coudurier, H. Praliaud, P. Meriaudeau, P. Gallezot, G.A. Martin and J.C. Vedrine</b>
Volume 12	<b>Metal Microstructures in Zeolites.</b> Preparation – Properties – Applications. Proceedings of a Workshop, Bremen, September 22–24, 1982 edited by <b>P.A. Jacobs, N.I. Jaeger, P. Jirů and G. Schulz-Ekloff</b>
Volume 13	<b>Adsorption on Metal Surfaces.</b> An Integrated Approach edited by <b>J. Bénard</b>
Volume 14	<b>Vibrations at Surfaces.</b> Proceedings of the Third International Conference, Asilomar, CA, September 1–4, 1982 edited by <b>C.R. Brundle and H. Morawitz</b>
