HUNGARY

The Institute of Isotopes of the Hungarian Academy of Sciences was organized in 1959 to supply radioactive chemicals in Hungary. The Institute of Isotopes has a very wide range of scientific activity.

Fundamental and applied research is being done in almost all the fields of nuclear sciences, besides the production of radioactive materials.

Today we have departments of inorganic, organic, and physical chemistry, physics, nuclear electronics, technology, and radiological design.

The rapid increase of the quantity and the good quality of the radioactive products of the Institute ensured the possibility to export them. The export started in 1961.

The radiochemical products and the irradiation services of the Institute are summarized in a general catalogue consisting of three booklets aiming at satisfying the interests of our customers:

1. Radiochemicals and Radiopharmaceuticals

In Vivo Kits

Simulated $^{99}\text{Tc}^m$ and ^{131}I Sources

Medical Radiation Sources (Applicators)

Reactor Irradiation Service

2. Labelled Compounds (^3H and ^{14}C)

3. Radiation Sources

Reference Sources

Standard Solutions

Gamma Irradiation

You are holding one of them in your hands. A number of research institutes, universities and industrial laboratories, hospitals and clinics use the products and services of the Institute of Isotopes in Europe with satisfaction.

We hope you will find in our catalogue whatever you want. If not, please contact with us at once and our specialists will help you to solve your problem.

Our products are delivered abroad by the trading company MEDIMPEX.
